Mr. Shewmake:

I appreciate your response. The only other thing I can think of at the moment is if you were able to confirm whether or not Encore has a problem with EA accessing their right of way for easier access to the drainage system we'll be sampling. If possible, Jason was planning on using it this week in order to go in and mark sediment/surface water sample locations so they will be ready to sample starting this next week.

Just to confirm – we'll go with stickups for MW-2 and MW-3, and flush mount for MW-1. I will also let you know in the morning if it looks like we need to delay an hour or two due to weather. It will be around 8:00 tomorrow morning.

Please let me know if you think of anything else, or have any other questions.

Thanks,
Mark Paddack
EA Project Manager

Mark,

I'm glad you contacted me. I was just about to call you to see what the plans are. My cell is Ex. 6 Personal Privacy (PP) Please call or text if you need to delay due to weather. It is difficult for me to respond to my epa email when on travel or in the field as we have to sign into the VPN first to get into our email. I will probably only check it 2-3 times a day, so use my cell if you want a fast response. I will have the keys to the site. I will also have copies of the access agreements. Can you think of anything else you need me from me?

I like your suggestion for the well completion. Lets go with that.

Myra from the Houston lab called. Some of our samples will go to a CLP lab and if we have delays collecting samples due to weather we need to notify them.

Mr. Shewmake:

I wanted to touch base with you regarding meeting EA's reconnaissance crew tomorrow morning. They are currently still planning on meeting at the site at 10:00 tomorrow morning, unless heavy/severe storms are still in the area. That said, will you be in your office by around 8:00 tomorrow morning so we can see what the weather is doing, and if needed, possibly delay meeting at the site an hour or two until the storms pass? Jason Stroup (copied) will be the main point of contact on EA's recon crew, and in the event you need to reach him, his cell number is: Ex. 6 Personal Privacy (PP)

Also, the drilling subcontractor was checking to confirm what type of surface completions we wanted so they can make sure they get the correct supplies. I recall you mentioned Vince saying we should consider using flush-mounted completions to help minimize vandalism, whereas TCEQ recommended stickups due to two of the locations being in a low area close to creek 5A2. I'm personally in favor of the TCEQ recommendation of using stickups for the two wells close to the creek (MW-2 and MW-3), and using either a stickup or flush-mounted surface completion for MW-1, which will be in close proximity to the waste storage building, and should not be prone to flooding. Please provide me your thoughts, and I will coordinate with the drilling subcontractor accordingly.

Thank You,
Mark Paddack
